Raw material sourcing for restaurants

1. Introduction:
1.1. Background

Bangalore, the capital city of Karnataka of southern India is an IT Hub.
People from indegineous culture resides in Bangalore as thousands of
people come to Bangalore
for exciting job or business opportunities. Bangalore is also famous for
its night life and food.
The population of youth is high compared to other metropolitan cities in
India which keeps the
city lively and crowded. Restaurants and food chains are also rushed with
quite a number of people

1.2. Problem

Just like other individuals, a friend of mine would like to start a
business of his own in Bangalore.
As there are many localities lined up with food chains and restaurants, a
supply of raw materials
or raw food and vegetables would be a good business. Being in Bangalore
for past 2 years, has given me idea
of localities to find delicious delicacies. So, suggestion regarding
localities for the business
with the appropriate data would be a good problem statement. And as the
capital that would be invested is
not that grand, we have targeted a few localities and would find the apt
one to start the business with.

2. Data Acquisition

The Data will be collected through foursquare API. Through the API, the
task of finding the cafes,
restaurants of 3 - 4 localities in Bangalore would be easy and efficient.
Out of which the most popular locality will be selected.
We can find it through the likes and tips and ratings which we will gather
from Foursquare API.
